Auto Ticket Classification using Flow Designer

PROJECT DEVELOPMENT PHASE

1. Update Set Creation

- Navigate to System Update Sets → Local Update Sets.
- Create Project Update Set.
- Set State to In progress and Application to Global.
- Save and make the update set the current set.

2. Custom Table Development

- Create the Incident WorkFlow table.
- Disable Create module.
- Enable Auto Number.
- Create the required fields through Form Designer.

3. Choice and Reference Configuration

- Add Category choices: Network, Hardware, Access, Performance.
- Add Subcategory choices: Wi-Fi, Projector, Forgot Password, Slow Computer.
- Add State choices: New, In progress, On hold, Resolved, Closed.
- Configure Caller, Assigned Group, and Assigned to as reference fields.

4. Dependency Development

- Open Subcategory field configuration.
- Enable Use dependent field.
- Set Category as the field that Subcategory depends on.
- Configure the dependent values for each Subcategory.

5. Flow Designer Development

- Create a new Flow named Auto Classify School IT Tickets.
- Set the trigger to Record Created.
- Use Category is Empty as the trigger condition.
- Create Wi-Fi, Projector, Password, and Slow Computer classification branches.
- Update Category and Subcategory based on the matched condition.
- Add Send Email action for caller notification.
- Activate the flow after configuration.
