Auto Ticket Classification using Flow Designer

PROJECT TESTING PHASE

1. Testing Objective

- Verify that the developed solution works as expected and meets the functional requirements.
- Validate end-to-end automation, data accuracy, notification, and basic access/security expectations.

2. Data Validation Checks

- Mandatory fields are captured correctly.
- Auto-number is generated without duplication.
- Category and Subcategory values are stored accurately.
- Reference fields resolve correctly to user and group tables.

3. Test Scenario 1 – Wi-Fi Issue

- Enter a Caller Name.
- Enter Short Description: WiFi not working in library.
- Save and reload the form.
- Expected Category: Network.
- Expected Subcategory: Wi-Fi.
- Expected result: Email is sent to the caller's email ID.

4. Test Scenario 2 – Projector Issue

- Enter a Caller Name.
- Enter Short Description: Projector not turning on.
- Save and reload the form.
- Expected Category: Hardware.
- Expected Subcategory: Projector.
- Expected result: Email is sent to the caller's email ID.

5. Email Validation

- Open All menus and search Emails.
- Open System Logs → Emails.
- Search using the configured email subject.
- Open the email record and use Preview mail to verify the notification.

6. Testing Result

- The documented test scenarios verify automatic classification and caller notification for representative ticket types.
