Auto Ticket Classification using Flow Designer

PROJECT DEPLOYMENT & FINAL PHASE

1. Deployment Objective

- Deploy the developed configuration to the target environment and prepare the solution for demonstration or production use.
- Ensure the solution is stable, reusable, and documented.

2. Final Update Set Preparation

- Open Local Update Sets.
- Open the Project Update Set.
- Change State from In progress to Complete.
- Save the form.

3. Update Set Export

- Use the Related Links option Export to XML.
- The update set data is downloaded in XML format.
- The exported update set can be shared for transferring the project configuration.

4. Final System Workflow

- Student/teacher creates a school IT support ticket.
- The ticket is stored in the Incident Workflow table.
- Flow Designer is triggered when the record is created and Category is empty.
- The Short Description is checked for predefined keywords.
- Category and Subcategory are automatically assigned.
- An email notification is sent to the caller.
- The completed configuration can be transferred using the exported update set.

5. Final Project Outcome

- The project provides an end-to-end no-code automation solution for school IT ticket classification.
- It reduces manual classification effort, standardizes ticket information, and improves the consistency of ticket handling.
- The documented solution can be extended in the future with features such as assignment automation, SLA tracking, or predictive intelligence.

6. Project Conclusion

- Auto Ticket Classification using Flow Designer demonstrates how ServiceNow Flow Designer can automate IT ticket classification without complex scripting or machine learning.
